REASONS FOR ALLOWANCE

Claims 3, and 6-36 are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claimed invention of tracing and debugging the computer program on a client's system by identifying and isolating the bugs on-line within a real-time environment to improve the quality of the software program and make the client's program error free with faster execution.

Specifically claims 6-8 and 25 are directed to remotely debugging the client's program at the client's site with generating trace, facilitating the process for debugging, execution of the client program together with a code module to trace the execution, transmitting the log from the client site to the development site, tracing execution of a client program, attaching memory images to the first code, translating trace information in readable form and allowing the user to interact with the system.

The closest prior art (Blasiak US 5,265,254 and Platt US 5,421,009) teaches debugging the software using code markers and installing software remotely but fails to teach facilitating the process for debugging, remotely debugging the client's program at a client's site with generating trace, executing the client program together with a code module which traces the execution, transmitting the log from the client site to the development site, attaching images to the first code and translating trace information in readable form.
